1. Intended platform for final project (e.g., Android, iOS)
   - I would like to work on Android Application Development

2. Intended framework/programming language for your final project (e.g., Kotlin, Swift)
   - Framework – Apache Cordova
   - Programming Language – HTML, CSS, JavaScript

3. Whether you want to explore cross-platform development
   - I want to explore cross-platform development

4. Include a brief explanation for your selections
   - Respected Instructor I have selected Android Application development as my intended platform for final project as I think that it would get my application more smartphone coverage in case of deployment after course.
   - I have selected Apache Cordova because I also want to learn development using this framework. I have not worked on this framework before, and it is not a drag and drop framework rather than it needs coded in HTML, CSS and JavaScript to develop an app with Apache Cordova which will also enhance my code writing skills. This framework extends support for Android and IOS as well. Hence, I would love to explore cross-platform development.
